### **DETAILED ACTION**

#### Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/13/2004 & 10/14/2004 has been entered.

## Response to Arguments

2. Applicant's arguments with respect to claims 1-5, 16 & 20 have been considered but are most in view of the new ground of rejection.

In addition, the Applicant states that the Applicant has not received the PTO 1449, which was filed on 9/5/2000, with the Examiner's initials as indicated in the previous Office Actions. In response, the Examiner re-submits the initialed and signed PTO 1449 based on its copy that was received on March 7, 2005 from the Applicant upon the Examiner's request.

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an

Application/Control Number: 09/585,553

Art Unit: 2615

international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-5, 16 & 20 are rejected under 35 U.S.C. 102(e) as being anticipated by Iijima et al (US 6,823,080).

Regarding claim 1, Iijima discloses an image processing apparatus for processing an image obtained by photographing a subject (Figs. 2-3B & 25), comprising:

an image data unit (1) for capturing a first image (left image) and a second image (right image) of the subject (2, 3), said second image being captured in a parallactic manner (see col. 11, line 64 – col. 12, line 41 and col. 14, lines 18-30);

an extractor (image processor 220) for extracting image information (i.e., luminance level or depth information) relating to conditions of the image from said first image and depth information indicating a distance between a point to another point on the subject from said second image (see Fig. 3; col. 10, lines 61-65; col. 12, lines 56-65; col. 13, line 64 – col. 14, line 3 and col. 14, lines 49-63 and note that since image information such as luminance and depth information in the object are extracted from both right and left images, the claimed limitations are generally encompassed);

a condition-determining unit for determining a process condition of said first image based on said depth information (col. 10, lines 7-15).

Regarding claim 2, Iijima discloses an image processing unit processing the image based on the condition for processing the image (col. 10, lines 7-15).

40.

Regarding claim 3, Iijima also discloses that the extractor extracts the depth information based on the parallactic image obtained by photographing the subject from different view points (i.e., view points from position A0 to position An). See col. 4, lines 33-40 and col. 10, lines 37-

Regarding claim 4, it is clear in Fig. 25 that an aimed object (i.e., a cup) is extracted based on the depth information, and the condition determining unit determines the condition for processing the image based on information including the data of the aimed object (col. 10, lines 7-15).

Regarding claim 5, see the analysis of claims 1 & 4, wherein image information is luminance level (col. 14, lines 55-62).

Regarding claim 16, see the analysis of claim 1.

Regarding claim 20, see the analysis of claim 1. Furthermore, Iijima discloses a recording medium storing therein a program executed by a computer (e.g., a microcomputer of system controller shown in Fig. 4 and/or an external computer shown in Fig. 2) to perform a method of processing an image obtained by photographing a subject (see col. 12, lines 42-49).

Application/Control Number: 09/585,553

Art Unit: 2615

#### Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nhan T. Tran whose telephone number is (571) 272-7371. The examiner can normally be reached on Monday - Thursday, 8:00am - 6:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Groody can be reached on (571) 272-7950. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
